ARISEN FROM SAMURAI SWORD TRADITION

ABOUT KAI

# A brand from Japan

For over 100 years, the kai company has been producing cutlery according to the traditions of the legendary samurai of old Japan. In the process, the desire to preserve ancient traditions and to combine them with innovative techniques represents no contradiction, but forms the basis for new products that honor Japanese blacksmithing while meeting modern demands.

With the highest quality standards, kai has made it its mission to produce special kai kitchen knives for daily use. Made from natural resources, shaped and formed according to the expertise of the ancient blacksmithing art of the samurai, kai cooking knives epitomise Japanese craftsmanship carried out with the highest degree of precision. From the design to completion of each individual knife, the focus is on the development of an integrated and carefully-considered product.

Since beginning as a family business in 1908 as Seki, kai has developed into an international company.

# Japanese blade shapes

**Santoku**, (loosely translated), the three virtues / benefits.  
The Santoku is the traditional Japanese shape for a utility knife, comparable to the German chef's knife. The name 'three benefits' is derived from its versatility for cutting fish, meat and vegetables.

**Nakiri**, (English) vegetable cutter.  
The Nakiri blade shape is a traditional Japanese vegetable knife, and it is therefore used primarily for this purpose. Despite its axe-like shape it is not suitable for chopping bones.

**Yanagiba**, (English), the willow leaf blade.  
The Yanagiba is a traditional Japanese slicing knife. Due to the slender, one-sided, hollow-ground and relatively long blade, the knife is particularly suitable for very thin cuts. The knife guarantees a skilful - and particularly clean, smooth cut. Such cuts are particularly important in the preparation of sushi. The length and shape of the blade allow for a long, pulling cutting movement.

**Deba**, (English) protruding blade.  
The Deba is used in Japanese cuisine as a traditional axe. The sturdy, heavy knife has a strong, broad blade and a single cutting edge. The front part of the blade is used mainly for filleting fish. The rear part of the blade is stronger and is used, among other things, for cutting small chicken and fish bones.

# Material references

## **Damascus steel**

In its modern form, Damascus steel is an alloy consisting of multiple visible layers produced in combination with a core steel. The base material used for the production of modern Damascus steel derives from steels with various contents of accompanying elements. The combination of steel grades with contrasting properties allows the production of particularly hard and at the same time flexible steels.

## **VG 2 steel**

(57-58  $\pm$ 1 HRC) is a Japanese steel distinguished by its high flexibility and resilience. Thanks to its high chromium content, this blade steel is particularly resistant to both wear and corrosion.

## **VG 10 steel**

(61  $\pm$ 1 HRC) is a classic Japanese high performance steel with excellent properties that have awarded it the moniker "gold steel". It is a stainless blade steel of the highest quality with a high carbon content. This allows it to be tempered particularly well in contrast to other stainless steels. Moreover, VG-10 boasts a particularly good edge retention.

## **VG MAX steel**

(61  $\pm$  1HRC) is based on VG-10 steel with further optimisations to its properties. Enriched with a higher chromium and vanadium content than VG-10, it demonstrates improved edge retention and resistance to corrosion. A higher carbon content also makes it harder than other steel grades.

## **6A/1K6 steel**

is a newly developed steel (56  $\pm$ 1 HRC). Blades fashioned from this material are especially resistant to corrosion due to their high chromium content. This is a very pure type of stainless steel. Its greater carbon content ensures a better edge holding ability.

## **SUS420J2 steel**

(56  $\pm$ 1 HRC) is a corrosion-resistant stainless steel with a high chromium content (14%) and an average carbon content (0.3%).

## **HRC**

refers to hardness tests according to Rockwell's C scale, employed for particularly hard materials. The Rockwell hardness value arises from the depth a testing object reaches whilst penetrating the test material (diamond, as the hardest material, serves as the value of reference with 100 HRC).

## **Pakkawood**

does not refer to a particular wood species, but rather the general term for impregnated layered wood veneers bonded using high quality resins to ensure the handle's stability and guarantee lasting durability in the face of moisture and organic material.

# Shun Classic Series

Series with 35 blade shapes  
Made in Japan

The Shun Classic Series unites centuries-old Japanese Samurai blacksmithing with today's modern and technically-sophisticated manufacturing processes. The result is an exceedingly high-quality range of Damascus knives, engineered with attention to the most minute details and designed to always retain its sharpness. The knives are therefore ideally suited for professional use. The Shun Classic blades are gorgeous to look at due to the distinctive semigloss pattern exhibited by the Damascus steel composite comprising 32 layers. This combination with the elegant, tapering handle made of black pakkawood, results in an overall aesthetic design that puts quality and functionality at its core.

Vegetable knife | DM-0715  
Blade 2.5" / 6,0 cm, Handle 10,4 cm

## The Shun Classic Blade

VG MAX steel with a hardness of 61 ( $\pm 1$ ) HRC forms the entire blade's core right up to its edge. Sheathed in 32 layers of Damascus steel, the knife embodies a peerless anatomy paired with a resilient blade that is both hard and flexible at once due to its hybrid composition. The Shun Classic blades have a double-sided edge.

## The Shun Classic Handle

The slim handle made of durable pakkawood is fashioned in a traditional Japanese chestnut shape. High quality resins added to the wood make the material particularly resilient and resistant to moisture. Its typical chestnut shape ensures a comfortable and secure grip whilst cutting, thanks to a small rim on its right side.

The integrated tang boosts stability and balance.

## L I M I T E D   E D I T I O N

### **Small Kiritsuke**

with serial number, series limited to 5,555 worldwide

After mastering all the cutting techniques, experienced chefs in Japan receive this knife with the Kiritsuke blade shape as a symbol of their allround expertise. Similar to the Santoku, this traditional blade shape is equally suitable for cutting vegetables, fish or meat. The pointed, 15 cm long blade is ideal not only for chopping, paring, portioning and cutting, but also for filleting. The notch at the rear end of the blade allows the handle and blade to be enclosed, allowing safe handling when working quickly.

# Shun Pro Sho Series

Series with 5 blade shapes  
Made in Japan

The Shun Pro Sho Series focuses exclusively on single-edged and thus traditionally Japanese blade shapes. Thanks to extremely high manufacturing standards and corrosion-resistant blade steels, this series is particularly suitable for continuous professional use.

The knife's elegant design combines classic Japanese design language with contemporary features in a sublime fashion. Their blades embossed with an elaborate ornamental pattern, created using an innovative manufacturing process, form the knives' visual highlight. As in the Shun Classic Series, the elegantly shaped and functional black pakkawood handle stands in stark contrast to the blade's opulent patterns. The series received a Special Mention in the 2019 German Design Award.

## The Shun Pro Sho Blade

The knife's blade is made of corrosion-resistant VG 10 steel with a hardness of 61 ( $\pm 1$ ) HRC.

Its cutting edge, honed to 45° on one side, ensures the extra sharpness required for extreme precision. The flat of the blade is hollow-ground to create a cushion of air between it and the material being cut. Combined with a wide and flat blade, this reduces friction to a minimum and guarantees perfect cutting results.

## The Shun Pro Sho Handle

The handle, made of black pakkawood, appears very elegant and fits the hand perfectly.

Its asymmetrical chestnut shape enables a secure and comfortable grip whilst cutting.

The integrated tang provides stability and balance.

# Shun Nagare Series

Series with 6 blade shapes  
Made in Japan

kai has created another innovative masterpiece of Japanese blacksmithing with its Shun Nagare Series. Its sophisticated design, the special properties of the materials employed, and a technically complex production process places this series of knives among the pinnacle of the luxury class. An artfully decorated, radial pattern of Damascus layers adorns the highly polished blades.

This effect, combined with the mottled grey-black handle, lends the knife an impressive overall appearance. The series' blades consist of two different types of steel, which are bonded to form a 72-layered piece of Damascus steel. This complex layering of two types of steel results in a blade with exceptional cutting performance, which has been recognised by the awarding of the German Design Award 2017 Special Mention.

Paring knife | NDC-0700  
Blade 3.5" / 9,0 cm, Handle 11,6 cm

Utility knife | NDC-0701  
Blade 6.0" / 15,0 cm, Handle 11,6 cm

## The Shun Nagare Blade

kai produces the so-called "dual-core" blade of the Shun Nagare Series in an innovative forging process. Here, two types of steel with different properties are combined to form a 72-layered piece of Damascus steel. The combination of flexible and robust VG 2 steel and an especially hard VG 10 steel results in a hardness of 61 ( $\pm 1$ ) HRC. As a result, the double-edged blades have a particularly long-lasting edge retention, and excellent sharpness.

## The Shun Nagare Handle

With its soft, rounded lines, the ergonomically shaped handle fits the hand perfectly. The forged tang in the handle lends the knife a robust stability and provides an optimum counterweight to the blade. The riveted handle, which is fashioned from mottled grey-black pakkawood - a waterproof and especially robust wood veneer - imparts a warm and valuable feel to the knife.

Santoku | NDC-0702  
Blade 7.0" / 18,0 cm, Handle 14,0 cm

Chef's knife | NDC-0706

# Shun Premier Tim Mälzer Series

Series with 13 blade shapes  
Made in Japan

The Shun Premier Tim Mälzer Series has been tailored specifically to the needs and requirements of professional chefs. In this premium series, the high-quality material properties of the well-known Shun Classic Series are combined with an entirely novel and commanding overall appearance. The blade is divided into three different textures:

The blade's back down to its middle has been hammered to create a surface known as Tsuchime.

This is followed by a fine matt Damascus grain typical for Shun. The blade is finished with a highly-polished precision cutting edge. The meticulously machined blade is paired with a medium brown, grained pakkawood handle. The blade's particularly hard and durable steel core provides incredible sharpness and a long-lasting cutting ability.

## The Shun Premier Tim Mälzer Blade

The Shun Premier blade's core fashioned from extremely hard VG Max steel and is enveloped in 32 layers of Damascus steel. This combination of different steel grades makes the blade both hard and flexible at once. The double-sided blade is easy to use because of its light weight and guarantees a clean and precise cut.

The incorporation of a hammered surface - known in Japan as Tsuchime - underlies not only aesthetic reasons, but also serves the release of material from the blade thanks to the resulting air pockets.

## The Shun Premier Tim Mälzer Handle

Thanks to its symmetrical shape, it is suitable for both left- and right-handed users. A continuous tang ensures stability and balance whilst cutting. As a special touch, the handle's end has been engraved with Tim Mälzer's bull's head, the professional chef's trademark.

# Shun Premier Tim Mälzer Minamo Series

Series with 3 blade shapes  
Made in Japan

The Shun Minamo Series forms an exquisitely elegant and individual addition to the premium class of the Shun Premier Series of knives.

The series unites Japanese and European elements in an especially artful manner. Tim Mälzer came up with the idea to develop a combination of the typically Japanese Santoku knife and the classic European chef's knife.

This fusion served as the basis for three distinct blade shapes.

The series is distinguished by a very clear form language. The combination of a black handle with a specially designed blade embellished with a fine Damascus grain makes every knife appear like an entirely unique object. The series' name originates from this fine grain, which is reminiscent of water's surface rippling in the rain (Jap.: Minamo). The blade's structure, composed of a hard core, and enveloped in a flexible Damascus steel ensures the utmost sharpness, long-lasting cutting ability, and ideal performance.

The Shun Premier Tim Mälzer Minamo series received the reddot award 2018 and the German Design Award 2019.

## The Shun Premier Tim Mälzer Minamo Blade

The Shun Minamo blade's core consists of extremely hard VG-MAX steel (61 (±1) HRC), wrapped in 32 layers of Damascus steel. The blades' high-gloss finish is completed with a Damascus grain. The combination of Santoku and cooking knife's hybrid nature, embodied in the blade's rectangular form, easily allows both rocking movements as well as the accurate chopping of cutting materials. The blades are double-edged.

## The Shun Premier Tim Mälzer Minamo Handle

Thanks to its symmetrical shape, the black pakkawood handle is suitable for both left- and right-handed users. The slight arch on the handle's underside enables a comfortable fit. The forged tang ensures a perfect balance between blade and handle.

# Tim Mälzer Kamagata Series

Series with 7 blade shapes

The Tim Mälzer Kamagata series of kitchen knives makes an impact with its high standard of functionality, robust quality and minimalist aesthetics. With its clean-lined design, the knife collection focuses on the essentials required for efficient processes in the kitchen. At the beginning of the multi-year development process in Japan, Tim Mälzer designed the original blade shape himself. The stylish curve of the blade gives the knives their characteristic contour. The name "Kamagata" (Japanese for "sickle-shaped") is derived from this distinctive shape. The blades are made of stainless steel with a polished finish. In combination with the black handle, the knives have an efficient, cool look and guarantee excellent handling and ergonomic features. Thanks to the special coordination of the different blade shapes, the Tim Mälzer Kamagata series provides the right knife for every purpose.

Office knife | TMK-0700  
Blade 3.5" / 9,0 cm, Handle 10,3 cm

Utility knife | TMK-0701

### **The Tim Mälzer Kamagata blade**

The attractively shaped blades are forged from 4116 stainless steel. They have a hardness of 57 (±1) HRC and are therefore corrosion resistant. Tim Mälzer's logo and personal signature are applied to the blade and, together with the satin finish, complete the exclusive and high-quality overall look.

### **The Tim Mälzer Kamagata handle**

The polished handle is ergonomically shaped and the symmetrical alignment makes it suitable for both left-handed and right-handed users. It sits comfortably in the hand and provides a secure, comfortable hold when working. The perfect balance between the handle and blade makes cutting a particularly smooth experience. Made using polished POM plastic, the handle is water resistant, hygienic and easy to maintain. Tim Mälzer's own "bull in the kitchen" trademark adorns the end of the handle, adding a sophisticated highlight.

SEKIMAGOROKU COMPOSITE

# Seki Magoroku Composite Series

Series with 8 blade shapes  
Made in Japan

Having received the Red Dot Design Award 2013, the Seki Magoroku Composite Series is the symbol of contemporary design expertise stemming from the house of kai. The series combines dynamism and lightness: the composite blade comprises two different steel grades, laminated and bonded using copper solder. This results in a stunning flash of copper running along its length. The resulting appearance is impressive and turns the blade into a highlight of hightech engineering. In combination with the pale wooden handle, the series appears futuristic, light, and sophisticated. Beyond that, the knives ensure ultimate sharpness and an extraordinary overall performance.

**Paring knife** | MGC-0400

## The Seki Magoroku Composite Blade

The blade combines different textures and grades of steel: the chamfered, polished bolster merges into the satined rounded blade back made of SUS420J2 steel and flows into a cutting edge made of especially hard VG-MAX steel. The double-sided blades combine a minimalistic aesthetic with high edge retention and corrosion resistance.

## The Seki Magoroku Composite Handle

The fair, cross-grained pakkawood handle is seamlessly attached to the integrated tang, which is suitable for both left- and right-handed users due to its symmetrical shape. The handle is slim and light, giving it rather top-heavy and dynamic handling characteristics. The seamless transition from handle to polished bolster enables the comfortable and easy holding of the blade between thumb and forefinger.

SEKIMAGOROKU

# Seki Magoroku Redwood Series

Series with 12 blade shapes

Made in Japan

Seki Magoroku Redwood is a series of chef's knives with a robust stainless steel quality and typically Japanese features. With its highly polished blades, the series includes both single-edged and double-edged blades that share the common denominators of stable and well-balanced functionality as well as sharpness.

The design combines a minimalist basic form with traditional Japanese aesthetics. The name comes from the use of red pakkawood, from which the handle is made. The pakkawood handle is particularly resilient and moisture-resistant.

**Paring knife | MGR-100P**  
Blade 4.0" / 10,0 cm, Handle 12,0 cm

**Utility knife | MGR-150U**

## The Seki Magoroku Redwood Blade

The blades of the Seki Magoroku Redwood Series are made of a carbon 1K6 stainless steel with a hardness of 58 ( $\pm 1$ ) HRC. Both the double-edged and the single-edged blade shapes boast long-lasting edge retention and excellent sharpness. The single-sided grinding traditionally used for Japanese blade shapes minimises friction between the blade and the cut material, thus enabling particularly precise cuts, as is required for the preparation of sushi, for instance.

## The Seki Magoroku Redwood Handle

The handle with its traditional chestnut shape is made of pakkawood. High-quality resins added to the wood make the material exceptionally resilient and moisture-resistant. The handle narrows down towards the blade and sits comfortably in the hand. Handle and blade are inserted into each other and firmly connected by a shiny black plastic ferrule.

**Nakiri | MGR-165N**

# Handling

Rinse the knives in hot water before using them for the first time. After each use, make sure that the knives are washed without delay (with a mild detergent) and dried off with a soft cloth. Acidic foods in particular should be rinsed off immediately after use.

For your own safety, you should always wipe the knife away from your body and away from the cutting edge with a cloth or towel.

Knives do not belong in the dishwasher, under any circumstances. Always wash the knives by hand in order to protect the material and maintain long-lasting sharpness.

We recommend that you cut on wooden or plastic chopping boards. Glass, stone, and granite are unsuitable as cutting surfaces, as they can cause permanent damage to the knives' delicate blades.

The blades are principally not suitable for cutting bones (including fish bones) or frozen foods.

When storing the knives, make sure that the blade does not come into contact with other metallic objects. This way, common causes of damage and staining can be avoided.

The best way to store the knives is in a knife block, in a wooden drawer insert, on a wooden magnetic knife rack, or in the drawer with a blade guard (or sheath).

Ensure that all knives with natural wooden handles do not remain in water too long. Oil the handle from time to time with a little neutral vegetable or camellia oil.

# Seki Magoroku Shoso Series

Series with 10 blade shapes  
Made in Japan

With their sober and elegant stainless steel look, Seki Magoroku Shoso knives are a real gem in the kitchen. Forged of stainless steel, these knives are sharpened and honed with great technical skill. The result is blades with the kind of perfect sharpness, robustness and durability that is ideal for daily use in the kitchen.

In order to reduce resistance to the cutting edge, the blades are sharpened with a slow grinding speed and finished using the latest process technology. This gives each Shoso a special sharpness and minimises the friction between the food to be cut and the blade.

The ergonomic stainless steel handle with its distinctive diamond pattern forms a seamless transition with the beautifully shaped, satin-finished stainless steel blade. These chef's knives are made entirely of stainless steel and ensure pleasantly easy, secure handling and optimum hygiene.

## The Seki Magoroku Shoso blade

The Shoso blade is forged from 1K6 stainless steel with a hardness of 58 (±1) HRC, which guarantees a high and uniform level of hardness as well as long-lasting cutting durability. Their convex grind gives the knives a stable cutting edge - ideal for a clean and precise cut.

The matt finish highlights the cool elegance of the knife.

## The Seki Magoroku Shoso handle

The matt handle made of stainless 18-8 steel is particularly robust, and ensures professional handling thanks to its symmetrical elliptical shape. The integrated diamond pattern provides a secure and comfortable grip while cutting. The seamless transition from handle to blade emphasises the clearly defined lines of the knives.

# Seki Magoroku Kinju & Hekiju Series

Series with 9 blade shapes  
Made in Japan

The chef's knives in the Seki Magoroku Kinju and Hekiju series are particularly light in the hand and enable precise cutting. The 7 blades of the Kinju knives are suitable for right-handers, while the two blades of the Hekiju series are specially designed for left-handed users. The Kinju series includes four Kinju Deba knives and three Yanagiba filleting knives for raw meat and raw fish, available in different sizes. The Hekiju series includes a Deba and a Yanagiba. The Seki Magoroku Kinju and Hekiju kitchen knives make a strong impression with their high functionality and durability. The typical Japanese blade shape in combination with the simple, black handle creates a timeless, minimalist aesthetic.

## The Seki Magoroku Kinju & Hekiju blade

Unique technologies are applied in producing the blade of the Seki Magoroku Kinju and Hekiju knife series, making it possible to create the demanding, pointed cutting edges of traditional Japanese kitchen knives. They are ground on one side, which guarantees an optimal and straight cut. Maximum blade sharpness is achieved by the highly precise processing of the cutting edge.

## The Seki Magoroku Kinju & Hekiju handle

The handles of the Seki Magoroku Kinju and Hekiju series differ in shape and material. The hexagonal handle of Kinju knives is made of laminated, reinforced wood for a comfortable feel when cutting. The handle is extremely water-resistant, thanks to the use of high-quality natural wood which is treated by a special process. The handle of the Hekiju knife, developed for left-handers, is more rounded than that of the Kinju series and consists of a robust resin with leather-type embossing.

# Wasabi Black Series

Series with 17 blade shapes  
Made in Japan

The Wasabi Black Series can trace its origins to Japanese communal kitchens. Thanks to a successful combination of enduring functionality and sharpness, robust material quality, and a minimalistic design, the numerous blades of the series are intended for uncomplicated and continuous use and convince with an impressive price-to-performance ratio.

Lastly, the series owes its easy-care handling to the water-resistant plastic handle - the pleasant feel of which has been achieved through the addition of bamboo powder. The matte black handle and highly-polish stainless steel blade fashioned from 1K6 steel are permanently moulded together, ruling out the accumulation of dirt.

## The Wasabi Black Blade

The polished blades of the Wasabi Black Series are made of newly developed corrosion-resistant 6A/1K6 steel with a hardness value of 56 (±1) HRC. The extensive range offers both double-edged blade shapes, as well as traditional Japanese single-edged blade shapes. The slightly arched back of the blade allows a secure grip during work, making it easier to make fine rocking movements, for example.

## The Wasabi Black Handle

The black plastic grip is water resistant and thus particularly robust. Its oval or chestnut shape (depending on the blade size) exhibits a pleasant, natural feel thanks to the addition of bamboo powder.

reddot design award  
winner 2012

German  
Design Award

NOMINEE 2014

# Junior chef's knife by Tim Mälzer

Made in Japan

In collaboration with Tim Mälzer, kai has developed a special Junior chef's knife, designed to aid children aged 6 and older to handle knives safely when cooking collaboratively. Children imitate cutting intuitively with a kind of sawing movement. On this basis, the stainless steel blade of the Junior chef's knife has been equipped with a finely serrated edge, designed to minimize the amount of effort and risk of slipping during usage. In addition to this, the blade has a rounded, blunt tip to further reduce risk of injury. Due to the non-slip and ergonomic plastic handle, the Junior chef's knife is safe in smaller hands. The Junior chef's knife comes with a flexible finger protector for maximum protection. The Tim Mälzer Junior chef's knife was awarded the Red Dot Design Award in 2012.

# Pure Komachi 2 Series

Series with 7 blade shapes

The Pure Komachi Series' knives introduce a wealth of playful colours. Visually, these knives are distinguished primarily by their coloured coatings. The series' blades are made of stainless steel and add significant value in terms of removing cut material from the blade, especially when combined with their coloured, nonstick coating. Each knife is assigned a specific colour, allowing for an easy overview. The ergonomic plastic handle is monochromatically tailored to match the coloured coating of the blade.

# Accessories

# Sharpening & Care

To sharpen kai knives in the traditional Japanese and therefore professional way, we recommend a number of specific ceramic-bonded whetstones.

Moreover, the range also offers electronic grinders, as well as care accessories and blade protectors.

1. Combination whetstone Grain 300/1000 | DM-0708
  2. Combination whetstone Grain 1000/6000 | DM-0600
- 18,4 x 6,2 x 2,8 cm L/W/H

1. Whetstone Grain 800 | WS-800
  2. Whetstone Grain 3000 | WS-3000
- 18,5 x 6,4 x 2,0 cm L/W/H

**Straightening stone Grain 80 | AP-2455**  
17,0 x 6,0 x 1,7 cm L/W/H

Use the flattening stone to round off rough edges and smooth depressions or irregularities in the surface of your whetstone.

**Diamond grindstone Grain 3000 | AP-0306**  
with reservoir, 25,2 x 9,4 x 3,5 cm L/W/H

The surface of the new diamond grindstone AP-0306 corresponds to a grain size of approximately 3000 compared to conventional grindstones and is ideal for sharpening slightly blunt knives.

# Grinding instructions

Before use, the whetstone should be completely soaked in water for about 10 minutes.

Please make sure that a light film of water is always visible on the surface of the stone during grinding. By doing this you ensure the knife edge is sufficiently cooled.

## Double-edged blades

- Lay one side of the blade onto the whetstone
- Start at the blade tip. Pull the knife at an angle of about  $15^\circ$  over the whetstone, whilst moving the blade with light pressure toward and away from your body.  
Repeat this process until you feel a fine burr.
- Turn the knife over and continue with sharpening the other side of the blade, as described above. Make sure that you use the same number of strokes on both sides. It is also important that the angle is always kept the same so that you end up with a symmetrically sharpened blade.
- Rinse knife and whetstone carefully in hot water.

## Single-edged blades

- First, lay the partially whetted side of the blade onto the grindstone.
- Start at the blade tip. Pull the knife at an angle of  $45^\circ$  over the whetstone, whilst moving the blade with light pressure toward and away from your body.  
Repeat this process until you feel a fine burr.
- Turn the knife over. Now lay the hollow-ground side of the blade flat on the grindstone and continue with sharpening - but only about 1/10 as much as when sharpening the knife's other side.
- Rinse both the knife and whetstone carefully in hot water.

# Cutting Boards & Knife Blocks

Knife blocks and cutting boards provide an optimum addition to the entire range of kai chef's knives. The timeless product portfolio is handcrafted to the highest standard and represents ultimate quality and design. In lieu of this, it is no surprise that high demands are made for the quality of the raw wood. Thus, the beauty and varied characteristics of the woods employed play as big a role in the production process as sustainability and environmental responsibility. The durability of the products matches the life cycles of the woods used, meaning the raw materials needed can grow back within the product's lifetime.

**Block board, Walnut | DM-0809**

## Shun Accessories

Sophisticated Shun kitchen accessories of proven quality. kai offers the perfect addition of selected kitchen tools and appropriate accessories for storage and travel, truly befitting the character of the Shun Series. The functional and elegant workwear assortment for demanding kitchen work completes the range.

**Fishbone tweezers** | BC-0751  
Stainless Steel, 13,9 x 2,1 x 2,3 cm L/W/H

**Japanese kitchen scissor** | DM-7100  
Blades: 5,0 cm

**Micro grater** | DM-0900  
Stainless Steel, 27,5 x 14,3 cm L/W

Oroshigane - the traditional Japanese tool is an excellent choice for ginger and wasabi. Its extremely sharp serration grinds very smoothly allowing the maximum extraction of flavour.

It can be used on both sides (smooth / very smooth). Its large grating surface provides a comfortable working area. Suitable for ginger, wasabi, radish, garlic, tomatoes and much more.

# Michel Bras Quotidien

The Quotidien knife series is a separate extension of the kai Michel BRAS collection. As the name Quotidien (French for "everyday") suggests, these knives are designed for daily use in the kitchen. The series consists of three different knife sizes with titanium-coated all-purpose blades, which are characterised by consistent functionality and sharpness as well as robust material quality. Due to their light weight, they are particularly easy to handle.

**Paring knife Quotidien 1 (S) | BK-0025**  
Blade 3" / 7,8 cm, Griff 9,8 cm

**Utility knife Quotidien 2 (M) | BK-0026**  
Blade 4.75" / 12,1 cm, Griff 10,6 cm

**Utility knife Quotidien 3 (L) | BK-0027**  
Blade 6" / 15,0 cm, Griff 12,3 cm

WINNER 2015

### Mandoline | BK-0206

40,0 x 12,5 x 25,0 cm

Easy handling und precise application - the new mandoline presented in the Michel BRAS Series combines practicality and high quality: five different blades made of VG10 steel for slices, crinkle-cuts and three sizes of julienne cuts (3 mm, 7 mm or 10 mm) can be interchanged as the situation requires. Fine workmanship and outstanding sharpness guarantee a perfectly clean cut, and ease the preparation of different kinds of vegetables. A food caddy ensures safe and easy handling, and a storage case protects the blades after use. In 2015, the Michel Bras Mandoline was awarded the Red Dot Design Award, the German Design Award, and the Design Plus Award.

With 5 interchangeable blades: 1x straight blade, 1x blade for wave and wafer cuts, as well as 3x julienne blades with blade spacings of 3mm, 7mm, and 10mm.

# The Sebastian Conran Gifu Collection

The Sebastian Conran Gifu Collection from kai was created in collaboration with British industrial designer Sebastian Conran, and consists of two powerful kitchen tools: the DIRK scissors and the JANUS grater, which are both characterised by a high standard of functionality and sharpness. For the collection Sebastian Conran worked together with 14 selected manufacturers from the Japanese region of Gifu, who all specialise in different forms of traditional craftsmanship. kai itself has its origins in the prefecture of Gifu in the heart of Japan, which is still a centre of traditional production today.

# Pure Komachi Grater

Grating series with 3 cutting edge patterns  
Made in Japan

The three graters in the Pure Komachi Series possess durable and extremely sharp stainless steel cutting edges. The grater's ultra-fine cutting edges are cut into the stainless steel using an innovative etching method, as opposed to the conventional punching method. This means that the cutting edges achieve a razor-like sharpness, reducing the effort required to a minimum. In addition, the substance being grated is precisely cut, not crushed, allowing the aroma and flavour to fully develop. The graters feature an ergonomic plastic handle with a non-slip coating, and are dishwasher-safe. In 2016, the Pure Komachi grater Series was awarded the German Design Award Special, the Good Design Award, and the Red Dot Design Award.

**Fine grater & zester | PG-0001**  
with Ishimatsu\* blade pattern \*(jap.: checkered pattern)  
Blade 13,5 x 3,0-5,0 cm L/W  
Handle 10,8 x 3,0-5,0 x 2,3 cm L/W/H

Suitable for e.g. hard cheese, chocolate, ginger,  
lemon zest, nutmeg and carrots.

**Ribbon grater | PG-0002**  
with Kanokoshibori\* blade pattern \*(jap.: dappled white spotted pattern)  
Blade 13,5 x 3,0-5,0 cm L/W  
Handle 10,8 x 3,0-5,0 x 2,3 cm L/W/H

Suitable for e.g. courgettes, soft cheese, carrots,  
chocolate, hard cheese and coconut.

**Julienne slicer | PG-0003**  
with Yabanemonyo blade pattern \*(jap.: arrow feather)  
Blade 13,5 x 3,0-5,0 cm L/W  
Handle 10,8 x 3,0-5,0 x 2,3 cm L/W/H

Suitable for e.g. kohlrabi, carrots, cucumber,  
courgettes, potatoes and radishes.

# Scissors

**7000 Series:** the professional scissor blades are made of particularly hard stainless steel (AUS 8A) with a hardness value of  $58 \pm 1$  HRC. The scissors feature an entirely matt surface with black PU grip plates. The patented "Duplex Interlock" adjustment screw ensures a consistent tension setting.

**V5000 Series:** The V5000 Series was developed specifically for general domestic use. The scissor blades are fashioned from stainless steel (NSSWR-2) with a hardness of  $56 \pm 1$  HRC. The scissor blades feature a satin finish. The adjustment screw made of stainless steel ensures perfect tension setting. The ergonomic handle, which is available in three colours per model, is made of a rigid elastomer, and therefore fits the hand comfortably and securely.
